FORTUNA CHAIN

$FCHA

Whitepaper v2.4

A Solana-Based Token with a Transparent, Product-Driven Ecosystem

Last updated: October 19, 2026

Disclaimer

This document is for informational purposes only and does not constitute investment, legal, tax, or financial advice. FCHA is a utility and community token; it does not represent equity, ownership, or a share of profits in any entity. Cryptocurrency markets are highly volatile and involve significant risk, including the risk of total loss of capital.

Nothing in this whitepaper should be interpreted as a guarantee of future value, returns, or performance. Prospective participants should conduct their own research (DYOR) and consult independent professional advisors before making any decisions related to FCHA.

This document may be updated as the project develops. The most current version is available at fortunachain.xyz.

1. Introduction

Fortuna Chain (FCHA) is a Solana-based token built around a simple principle: transparency and real, working products over hype. The project is developed and maintained with no venture capital backing and no paid influencer campaigns.

Rather than launching a token in isolation, FCHA is built alongside a small but growing ecosystem of tools — a live presale platform, staking rewards, a community game, Fortuna Wallet, a self-custody Solana wallet, and Fortuna Insight, an AI-powered wallet analysis tool for Solana — all designed to give the token real utility beyond speculation.

2. Vision & Philosophy

The crypto space is saturated with projects that promise everything and deliver nothing verifiable. Fortuna Chain takes the opposite approach:

- Verifiable commitments — Team and Advisor token locks are enforced on-chain via Jupiter Lock, not just promised in a document.
- Working software first — every ecosystem feature listed in this whitepaper is either live or in active, visible development.
- Security as a baseline, not an afterthought — the platform's backend has undergone security hardening (see Section 7).
- Organic community growth — no bought followers, no fake engagement, no paid pump campaigns.

3. Token Overview

Token Name	Fortuna Chain
Ticker	FCHA
Blockchain	Solana (SPL Token)
Total Supply	1,000,000,000 FCHA (fixed)
Contract Address	DL4Sb7bbh3XAFbZh3uCAFgeW1AVKtjgxpfWAC9p64VTu

The total supply is fixed at launch. No additional FCHA tokens can be minted after deployment, ensuring predictable, non-inflationary tokenomics.

4. Tokenomics

FCHA supply is allocated across six categories, each serving a specific function in the ecosystem:

Allocation	Percentage	Tokens (FCHA)
Presale	50%	500,000,000
Liquidity	15%	150,000,000
Team	10%	100,000,000
Staking Rewards	12%	120,000,000
Ecosystem	8%	80,000,000
Advisors	5%	50,000,000
Total	**100%**	**1,000,000,000**

4.1 Team & Advisor Lock

Team (10%) and Advisor (5%) allocations — 150,000,000 FCHA combined — are locked on-chain via Jupiter Lock until August 15, 2028. This lock is independently verifiable on the Solana blockchain and cannot be bypassed or withdrawn early by the team.

4.2 Ecosystem Fund

The Ecosystem allocation (8%) funds community initiatives, including in-game leaderboard rewards, community incentives, and future ecosystem tools. It is not part of team compensation.

5. Presale

The FCHA presale is live at fortunachain.xyz and operates independently of third-party launchpads, giving the project full control over security, pricing logic, and user experience.

5.1 Presale Features

- Multi-wallet support: Phantom, Solflare, Backpack, and Coinbase Wallet, including mobile deep-link support
- Real-time contribution dashboard tracking presale progress
- Phase-based pricing — price increases as each funding milestone is reached
- On-chain transaction verification for every contribution

5.2 Presale Wallet

Hu1nb9f7WqXfaNJddQXHu4G5RayMdfhVQQSTRKpW2h3K

5.3 Token Distribution

Tokens are distributed automatically on a per-phase basis rather than only after the full presale target is reached. As soon as the phase a buyer contributed to reaches its own funding goal, that contribution is verified directly against the transaction recorded on the Solana blockchain, and the corresponding FCHA is sent to the buyer’s wallet without any manual claim step.

- Each contribution is verified on-chain before it counts toward a phase's goal
- Buyers do not need to wait for later phases to fill before receiving tokens from a phase that has already completed
- There is no refund mechanism: if a phase's goal is never reached, no tokens are distributed for that phase and contributed funds are not automatically returned

6. Staking

Staking is live. Any wallet holding FCHA can stake it from fortunachain.xyz and claim principal plus reward once the lock period ends; there is no early withdrawal. Each percentage below is the total reward for the whole lock period, paid once at claim time — not an annual rate multiplied by years — and is fixed when the stake is verified. The phase bonus depends on the presale phase that is live when the stake is made. Staked tokens are held in a project-controlled vault wallet, not a smart contract, so staking relies on the team honouring claims.

FCHA holders can lock tokens for a chosen duration in exchange for staking rewards, funded from the 12% Staking Rewards allocation.

- Tiered base reward depending on lock duration, from 12% up to 80%
- Additional phase-based bonus of up to 20%
- Maximum combined reward capped at 100%

Staking rewards are designed to reward long-term holders and reduce circulating supply pressure in the early stages of the token's life.

7. Product Ecosystem

7.1 Presale Platform

A custom-built platform (Netlify + Supabase) handling wallet connection, contribution tracking, phase pricing, and staking — built and maintained in-house rather than outsourced to a generic launchpad template.

7.2 Community Game & Leaderboard

An in-browser game is live directly on fortunachain.xyz, with a leaderboard tracking player scores. Leaderboard-based community rewards, funded from the Ecosystem allocation, are in development.

7.3 Fortuna Insight

Fortuna Insight is an AI-powered wallet analysis tool for Solana, available as a live public demo at fortunainsight.netlify.app and still in active development. It analyzes any wallet address and produces a clear, explainable health report — every insight is backed by real on-chain evidence rather than opaque AI predictions. Fortuna Insight is being built as a standalone product within the Fortuna Chain ecosystem, expanding FCHA's utility beyond the token itself.

7.4 Fortuna Wallet

Fortuna Wallet (fortunawallet.xyz) is a self-custody Solana wallet built by the Fortuna Chain team. It runs in the browser, so nothing needs to be installed. The recovery phrase is encrypted on the user's own device and is never sent to Fortuna Chain. The wallet can send and receive SOL and SPL tokens including FCHA, swap tokens and stake SOL. fortunachain.xyz can connect to it, and only fortunachain.xyz: every request opens a confirmation screen and needs the user's password before anything is signed, and dangerous requests such as handing over token authority are blocked. Fortuna Wallet is new software that has not had an independent security review, so users should start with small amounts. Using it is optional; the presale and staking also work with Phantom, Solflare, Backpack and Coinbase Wallet.

7.5 Security Hardening

The project's backend infrastructure has undergone an internal security review (a self-assessment, not an independent audit), including Row Level Security (RLS) policy hardening on presale and leaderboard data, restriction of privileged database functions to trusted server-side roles only, and duplicate-transaction protection to prevent presale contribution manipulation.

8. Roadmap

Phase	Milestones	Status
01 — Genesis	Smart contract deployment, Whitepaper v2.4, Community launch, Internal security review	Complete
02 — Presale	4-phase presale launch, Wallet integration, Referral system (10%), Staking activation	In Progress
02b — Ecosystem Tools	Fortuna Insight — AI-powered Solana wallet analysis tool; Fortuna Wallet — self-custody Solana wallet that connects to the presale site	In Progress
03 — Listing	Raydium DEX liquidity, CoinGecko & CMC listing, Third-party audit	Planned
04 — Ecosystem	AI observation layer, On-chain analytics, Governance system, CEX listings	Planned

Status reflects the project's current state as of this document's publication and will be updated as milestones are completed. The live, up-to-date roadmap is always available at fortunachain.xyz.

9. Team

Fortuna Chain is developed by a team with a background spanning the construction industry and hands-on blockchain/crypto development. The project is self-funded and community-driven, with no external investors or venture capital involvement.

The Advisor allocation (5% of total supply) is reserved for future strategic advisors as the project grows, and will be disclosed transparently as those relationships are formalized.

10. Risk Factors

- Cryptocurrency prices are highly volatile; the value of FCHA can decrease significantly, including to zero.
- Regulatory frameworks for digital assets vary by jurisdiction and are subject to change.
- As with any early-stage project, roadmap items are subject to change based on technical, market, or resource constraints.
- Participants should only contribute funds they can afford to lose and should independently verify all on-chain claims made in this document.
